

diafocus - 35 mm projectors

Low price - high value

Enter the world of slides:

- permanent autofocus
- IR or cable remote control integrated in projector body
- interchangeable lenses
- single slide holder
- vario magazine system

The two KINDERMANN starter models are characterized by their solid construction and reliable technology. Many components of the more sophisticated ranges are built-in, such as the light, ventilation and transport system. Even convenient features, e. g. a 2-channel IR remote control, are recommendable in a starter model.

Interchangeable lenses

We offer a number of inter-changeable lenses with different focal lengths, from 55 up to 150 mm, or zoom lenses.

Convenient handling

The remote control with 2 separate buttons for forward and backward transport makes the handling easy and convenient.

Permanent autofocus

The autofocus automatically adjusts the picture sharpness. As with all the other KINDERMANN projectors the initial adjustment is done manually via the focus wheel.

Single slide holder

Wrongly inserted slides can be quickly turned round. It is also possible to project a single slide without a magazine.

Integrated remote control

The remote control is integrated in the projector's body.

diafocus 1500 E No. 8000
