

Magic projectors

Be carried away!

Simply magic!

- 35 mm slide projectors with powerful halogen lamps
- four-channel IR remote control with integrated laser pointer
- selective autofocus
- clearly identifiable command buttons for easy use, ideal for any lecturer
- designed for the ambitious amateur and for the users in schools and in the industries

Convenient wireless operation with laser pointer

The Magic IR remote control has separate buttons for forward and backward transport in order to avoid misfunctions. There are two other buttons to override the selective autofocus. The fifth button activates the laser pointer, a bright red light spot, to point at details. The laser pointer complies with safety regulations of safety class 2.

Quick slide change

The quick slide change - approx 1.1 seconds - nearly shuts out the dark intervals between the single pictures and makes your show less tiring.

If there is no slide in the magazine, the slide-controlled diaphragm protects the audience against the dazzling projection light.

Selective autofocus

The autofocus automatically adjusts the sharpness of the picture. A manual switch on the remote control gives you the extra possibility to override the mechanism if needed. All corrections are made so efficiently that they are nearly invisible to the eye.

Magic 2500 AFS-IR No. 8024

35 mm slide projector

- with 4-channel IR remote control with laser pointer
- with magazine
- selective autofocus
- halogen lamp 24 V/250 W
